US-09-252-91A-2186

US-09-252-91A-2186

Sequence 2186, Application US/0925291A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT MACC J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1999-02-18

PRIOR FILING DATE: 1999-02-18

PRIOR PILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Genes were identified by a combination of several methods: Gene prediction programs including Fgenesh (http://www.softberry.com/), genscan (http://cns.ob.umit.edu/GENSCAN.html), GeneMarkHMM (http://genemark.biology.gatech.edu/GeneMark/), tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/), searches of the complete sequence against NCBI none redundant protein database (nr) (ftp://ncbi.nlm.nih.gov/blast/db) and the EST database at NCGR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

similar to many eukaryotic peptidases e.g. SW:P31430 (MDP1_RAT) rat renal dipeptidase (410 aa) fasta scores; opt: 440, Z-score: 474.0, 36.056% identify (38.906% ungapped) in 355 aa overlap. Also weakly similar to TR:Q9KH70 (EMBL:AF268476) thermostable dipeptidase from Brevibacillus borstelensis (307 aa) fasta scores; opt: 273, Z-score: 2894, 28.159% identify (30.116% ungapped) in 277 aa overlap. Contains Pfam match to entry PF01244 Renal dipeptase, Renal dipeptidase. Also similar to neighbouring upstream CDS SCBAC19G2.13c"

Novel polynucleotides encoding integrase, excisionase and an integrase attachment site isolated from a lysogenic phage pMLP1, useful for transforming an actinomycete.

Claim 5; Page 32-33; 34pp; English.

The present invention relates to novel polymucleotides encoding integrase (int) and excisionase (xis) and an integrase attachment site (attp) which are isolated from pMLP1, a bacteriophage (lysogenic phage) isolated from Micromonospora carbonace ava. africana. Polymucleotides of the invention are useful for transforming an actinomycete with a vector. They are also chromosomes. The integrating vectors are used to express actinomycete penes, manipulate secondary metabolic pathways and create new metabolic products such as hybrid antibiotics. The present sequence is pMLP1 excisionase DNA from Micromonospora carbonacea

The sequence encodes 2 integrases which permit site specific integration of a vector into an actinomycete, especially a Micromonospera, genome.

The invention relates to nucleic acids and vectors comprising a M. carbonacea everninomicin biosynthetic pathway resistance gene product integrative version of the vector is useful for introducing a everninomicin pathway gene (a bottle-neck gene) into an actinomycete of the genus Micromonospora. The DNA encoding the biosynthetic proteins is everninomicin pathway gene (a bottle-neck gene) into an actinomycete of the genus Micromonospora. The DNA encoding the biosynthetic proteins is useful for synthesising novel everninomicin-related compounds, arising from modifications of the DNA sequence designed to change glycosyl and modified orsellinic acid groups contained in everninomicin, for expressing functional or mutant everninomicin biosynthetic protein conterninomicin and products and preferably biosynthesis of everninomicin or other secondary metabolic products, improving the yield of everninomicin and organises to generate libraries of orthomycins, e.g. and to produce novel everninomicins and also as a hybridisation probe to identify homologous sequences. The encoded polypeptides are useful for combinatorial biosynthesis to generate libraries of orthomycins, e.g. everninomicin analogues/homologues and to integrate genes of the integrase allows for increasing a given gene dosage. The integrase the yield of known products or to generate genes of a heterologous gene of confinite content hosts and to integrate genes of a heterologous genes which increase the yield of known products or to generate genes in order to carry out bioconversions with compounds to which the strain is to carry out bioconversions with compounds to which the strain is commally sensitive and is thus useful in fermentation processes involving encoding field.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1022
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1082
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1083 stresecciontescados acomada a constancida con contenta de con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

Novel nucleic acid molecule comprising mitomycin biosynthetic gene cluster useful for cloning mitomycin biosynthetic genes for elucidating the molecular basis of mitosane ring system biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to isolated and purified nucleic acid molecules from the mitomycin biosynthetic gene cluster. Mitomycins are a group of natural products that contain a variety of functional groups, including amino benzoquinone and axiridine ring systems. The S. lavendulae

mitomycin biosynthetic gene cluster comprises 47 mitomycin genes spanning 55kb of DNA. The invention includes an expression cassette comprising a mitomycin biosynthetic gene operably linked to a promoter, and host cells transformed with the cassette. The nucleotide, and protein sequences and the transformed host cells of the invention result in antiasthmatic, antiinflammatory, cytostatic, immunomodulatory, and antibiotic cativities. The nucleotide sequences are used to elucidate the molecular basis for the biosynthesis of the mitosane ring system, as well as to engineer the biosynthesis of novel natural products, e.g. antibiotics, anti-inflammatory agents, anti-cancer agents, immune-enhancers, immunosuppressants, agents to treat asthma, chronic obstructive pulmonary disease as well as other disease involving respiratory inflammation, or cholesterol-lowering agents or as crop protection agents (e.g. fungicides or insecticides) as well as bipolymers, e.g., in packaging or biomedical applications, or to engineer PRA monomer synthases. Sequences AAG55782-C558814, AAG58815-C55886 and AAG5862-C55869 represent PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CCAGGCGCATCCAGAAGGACCGGCCACCGTCGGCCGGTGGGAGGACGGCAAGAACCGGC 151

```
The invention relates to an isolated and purified nucleic acid molecule comprising a sequence having mitomycin biosynthetic gene cluster, or its variant or fragment. Also included are an expression cassette comprising the novel nucleic acid molecule (operably linked to a promoter functional in a host cell), a recombinant bacterial host cell in which at least a portion of a nucleic acid molecule comprising mitomycin biosynthetic gene cluster is disrupted (resulting in a recombinant host cell) that produces altered levels of mitomycin relative to a corresponding nonrecombinant bacterial host cell), introducing exogenous DNA into a refractory streptomycin strain, identifying a nucleic acid molecule that is related to at least a portion of a nucleic acid molecule comprising a mitomycin cell and a product produced by the recombinant host cell. The nucleic acid encodes a Mitz, Mitc, Mitc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            742

This invention relates to isolated and purified nucleic acid molecules from the mitcomycin biosynthetic gene cluster. Mitomycins are a group of matural products that contain a variety of functional groups, including amino benzoquinone and axiridine ring systems. The S. lavendulae mitomycin biosynthetic gene cluster comprises 47 mitcomycin genes spanning 55kb of DMA. The invention includes an expression cassette comprising a mitomycin biosynthetic gene operably linked to a promoter, and host cells transformed with the cassette. The nuclectide, and protein sequences and the transformed host cells of the invention result in antiasthmatic, antinflammatory, cytostatic, immunomodulatory, and antibiotic activities. The nuclectide sequences are used to elucidate the molecular basis for the biosynthesis of the mitomane ring system, as well as to engineer the biosynthesis of novel natural products, e.g. antibiotics, anti-inflammatory agents, anti-cancer agents, immune-enhancers, immune-enhancers, immune-enhancers, immune-enhancers, immune-enhancers, immune-enhancers, elections disease as well as other disease involving respiratory inflammation, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cholesterol lowering agents or as crop protection agents (e.g. fungicides or insecticides) as well as bipolymers, e.g., in packaging or biomedical applications, or to engineer PHA monomer synthases. Sequences AAC55782-C55881, AAC55815-C55849 and AAB32485-B32542 represent mitomycin biosynthetic gene cluster DNA sequences and encoded proteins. Sequences AAC55812-C55814, AAC55856-C55856 and AAC55862-C55869 represent PCR primers used in the cloning of the mitomycin biosynthetic genes

The invention relates to an isolated and purified nucleic acid molecule comprising a sequence having mitomycin biosynthetic gene cluster, or its variant or fragment. Also included are an expression cassette comprising the novel nucleic acid molecule (operably linked to a promoter functional in a host cell), a recombinant bacterial host cell in which at least a portion of a nucleic acid molecule comprising mitomycin biosynthetic gene cluster is disrupted (resulting in a recombinant host cell) that produces altered levels of mitomycin relative to a corresponding nonrecombinant bacterial host cell), introducing exogenous DNA into a refractory streptomycin strain, identifying a nucleic acid molecule that is related to at least a portion of a nucleic acid molecule comprising a mitomycin cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the recombinant host cell and a product produced by the formal production of mitomycin antiblocies, which induce apoptosis and hence are useful as anti-tumour (via tumour hypoxia) agents and are useful in treating cancer. The gene cluster was isolated from Streptomyces lavendulae. The present sequence is an operon or gene cluster encoding the mitomycin biosynthetic proteins of the invention.
